

## **Antalpa Commits 6,052 XAU₪ Units to XAUE Protocol**

April 24, 2026

SINGAPORE, April 24, 2026 (GLOBE NEWSWIRE) -- Antalpa Platform Holding Company (NASDAQ: ANTA) ("Antalpa" or the "Company"), a leading institutional digital asset financing platform, today announced its participation in XAUE, a new protocol that enables yield generation on gold holdings by allowing tokenized gold to be deployed while maintaining full exposure to the underlying asset. Antalpa is committing 6,052 units of XAU₪ to the protocol, valued at approximately US\$29 million based on the prior day's gold benchmark price <sup>1</sup>.

Aurelion (NASDAQ: AURE), a subsidiary of Antalpa and the world's first NASDAQ-listed XAU₪ treasury company, is separately participating in the XAUE protocol.

### **Putting Gold to Work at Institutional Scale**

Gold has historically served as a store of value but has remained largely static in its financial utility. XAUE introduces a structure through which tokenized gold can be deployed to generate returns while the tokenized gold retains full exposure to the underlying asset, enabling gold to be used more actively within liquid global financial systems.

### **Antalpa's Participation**

Paul Liang, Chief Financial Officer of Antalpa, commented, "Gold remains a foundational asset in institutional portfolios, yet its inability to generate yield has long constrained its role in active capital management. Our participation in XAUE reflects a deliberate allocation decision, one that seeks additional liquidity via yield on gold and without compromising the custody standards and risk controls that institutional investors require. We view this as a responsible evolution in how gold can be deployed at scale."

### **About Antalpa**

Antalpa is a leading fintech company specializing in providing financing, technology, and risk management solutions to institutions in the digital asset industry. Antalpa offers Bitcoin supply chain and margin loans through the Antalpa Prime technology platform, which allows customers to originate and manage their digital assets loans, as well as monitor collateral positions with near real-time data.
